Notes for Mentor Review

According to the rules of the OSPP, students' project applications have to be approved by the Committee after being reviewed by their mentors, and the selected students' applications will be post on the official website of OSPP.

Project Development

The mentor cannot help students to develop the project by coding directly or help them debug the project. The project should be completed independently. Mentors can guide students around the project in laying out plans, providing links to relevant recommendation documents, teaching students on how to participate in the community, and providing directional suggestions for improvement in the implementation of the program.

Review Criteria

1. The Git email that students submit to the community open source repository must be the same email address they use to sign up;

2. The project needs to be submitted to the community open source repository in the form of PR and have been merged;
3. In terms of progress, mentors should consider the actual development situation of students and the difficulty of development tasks to determine whether they are in line with the relevant planning of the project plan;
4. In terms of results, mentors should confirm that the final results submitted by the students meet the requirements of the project.
